

OPERATIONAL ADVISORY: WEST SIDE REQUIREMENTS - January 25, 2019

Based on its most recent weather forecast, Dominion Energy Ohio (DEO) currently projects that nominations to its West Side receipt points from ANR Pipeline, Panhandle Eastern Pipeline (MAUMEE) and NEXUS Gas Transmission may not be sufficient to meet anticipated customer requirements for Friday, January 25, 2019 (gas day 25).

DEO is posting this Operational Advisory to inform customers and suppliers that they may be required to increase West Side deliveries in accordance with DEO's General Terms and Conditions of Transportation Service and provisions set forth in the System Operational Update and Review document posted on DEO's EBB.

The document can be found at:
www.dekaflow.dominionenergy.com
Click on DOMINION ENERGY OHIO

Refer to the file DEO System Operational Update dated December 4, 2018

If the temperature forecasts do not change, DEO will issue a point specific Operational Flow Order (OFO) for increased West Side supply requirements and customer/marketer specific West Side Supply requirements will be available in the OFO window in DekaFlow.

Please contact the Transportation Services department at EOG_TRANS_SERV@dominionenergy.com with any questions.
